Kevin Love Undergoes Successful Hand Surgery

MINNEAPOLIS/ST. PAUL – Minnesota Timberwolves forward Kevin Love underwent successful surgery on Tuesday evening to repair a fracture in his left hand (fourth metacarpal). The procedure was performed by Dr. Andrew Weiland of New York City's Hospital for Special Surgery and involved the insertion of three screws into Love's hand. The typical recovery time for this type of injury is six to eight weeks.

Love suffered the injury during the third quarter of the Timberwolves' Oct. 16 preseason game at Chicago. In his four preseason appearances, Love averaged 12.5 points (.471 FG%) and 11.5 rebounds per game.
